1.1 Background and Necessity for the Web Application

Fandom is a group or community of fans sharing a common passion. Fandom enthusiasts exist across Anime, Gaming, Movies, TV Shows, Korean Pop (K-Pop), Comics, Manga, and Cosplay communities.

Today they rely on a scattered mix of forums, social media pages, and niche sites to find the content they love. Existing resources are often single-fandom, cluttered with ads, difficult to navigate, or lack the rich media experience that fans genuinely want.

There is a growing demand for a single, engaging, and visually rich information hub that brings multiple fandoms together under one roof. A Web application is required to fulfil this demand by offering a dynamic and responsive platform which provides features such as:

- Curated and categorized content spanning multiple fandom domains
- Search, sorting, and filtering across all content types
- Rich multimedia experiences including galleries, videos, audio, and trailers

Built with modern front-end technologies and a robust backend, it should ensure a fast, seamless, and immersive browsing experience. This makes it the go-to destination for fandom communities to explore, discover, and celebrate the universes they love.

1.2 Proposed Solution

To address the gap in a unified, engaging fandom experience, it is proposed to develop a fully functional Web application named **Fan Hub Plus** – a responsive and interactive **Fandom Universe platform** designed for anime watchers, gamers, movie and TV buffs, K-Pop stans, comic and manga readers, and cosplay enthusiasts alike.

The application offers a seamless user experience by organizing content into clearly browsable categories – Anime, Gaming, Movies, TV Shows, K-Pop, Comics, Manga, and Cosplay. Each category is presented through an intuitive UI, interactive galleries, and visual storytelling, optionally with an Artificial Intelligence (AI)-powered chatbot on hand to help visitors find exactly what they are looking for.

Flow Diagrams

Broad level flow diagrams depicting interaction between various entities and the application are shown here.

For example, a visitor's journey from landing page → category browsing → content detail → chatbot (Optional) → bookmarking, and an admin content-management flow.

1.3 Purpose of the Document

This document presents a detailed description of the **Fan Hub Plus** application, explaining its features, purpose, scope, and limitations. It is intended for both stakeholders and developers of the application.

1.4 Scope of Project

Fan Hub Plus is an End-to-End Web solution designed to serve as an engaging and visually rich information hub for fandom enthusiasts. It offers a personalized experience through user registration and login, curated content across multiple categories – Anime, Gaming, Movies, TV Shows, K-Pop, Comics, Manga, and Cosplay – and a customizable dashboard.

User roles can comprise Visitor, Registered users, and Administrators.

Visitors can browse and can have limited access to the Web application.

Registered users can browse and explore content with robust search, sorting, and filtering capabilities. They can also discover image galleries, videos, audio clips, featured articles, character profiles, event highlights, trailers, merchandise showcases, and upcoming release listings. An optional AI-powered chatbot can assist visitors by answering frequently asked questions and guiding them through the platform.

The application includes a backend system to support data storage, user session management, feedback submission, and content updates. Built with modern technologies, the platform is scalable, responsive, and adaptable for fan communities, fan conventions, and personal use. Administrative functionality will also be part of the application, giving full control over content, media, including user management, the chatbot's knowledge base, and so on.

1.5 Constraints

Development of the **Fan Hub Plus** Web application must adhere to several constraints to ensure its successful implementation and operation. Technically, the application must be compatible with major Web browsers and responsive across various devices. You may encounter constraints related to data storage, media file sizes, data synchronization, and backup procedures.

The usage of fandom-related images, videos, audio clips, and other media may be subject to licensing agreements and copyright restrictions. It is important to understand and comply with these constraints to avoid legal issues. The Web application will not have any functionality for actual merchandise purchase, order processing, or payment gateways – merchandise showcases are for display and discovery purposes only, and this functionality is beyond the scope of the application.

1.6 Functional Requirements

The **Fan Hub Plus** Web application will offer a complete and category-based fandom exploration experience with dynamic frontend features and robust backend support.

Following are the detailed functional requirements:

User Authentication and Management

- Secure session management
- Forgot password/reset password feature and email verification or tokenized link
- User profile creation with editable favorite fandoms, categories of interest, and display preferences
- Optional profile picture/avatar upload feature

Personalized Dashboard

- It displays personalized greeting, recent activity, favorite fandoms, and bookmarked items

Fandom Content Explorer (with Advanced Filters)

- It fetches and displays curated content – articles, profiles, or media – across categories (Anime, Gaming, Movies, TV Shows, K-Pop, Comics, Manga, Cosplay) from a backend database
- Support for a multi-level search and filtering feature (category, genre, release year, popularity, or content type)
- Various Sorting options (latest, most popular, or alphabetical)

AI-Powered Chatbot Assistant (Optional Feature)

You may optionally use AI tools to build a conversational chatbot that has following features:

- Answers frequently asked questions about platform and its content
- Optionally, recommends content and categories based on visitor preferences and conversation context
- Guides new users through the platform's features via a multi-step conversational flow
- Includes chat history stored for context continuity and progress tracking

Interactive Multimedia Center

- Enables streaming embedded videos, trailers, audio clips (podcasts or soundtracks), and animated explainers
- Enables Admin-controlled tagging and categorization of media
- Supports User feedback/rating on media (5-star or thumbs-up/down system)

Character Profiles and Featured Articles Hub

- A Card-based character profiles with fandom-based and category-based filtering
- The Featured articles with rich text, embedded images, and timeline-style event highlights
- An Event highlights section (conventions, premieres, releases) presented in a storytelling format

- An option for users to submit fan content or articles (admin approval required)

Merchandise Showcase and Resource Library

- Merchandise showcase with image galleries grouped by fandom and category
- Upcoming releases section listing anticipated anime, games, movies, shows, comics, and merchandise drops
- Backend-driven tagging (Example: 'Limited Edition,' 'Pre-Order,' or 'Collectible')
- Optional feature - Admin can track view count and popularity of merchandise and content items

Feedback and Analytics

- Dynamic feedback form with type categorization (bug, suggestion, or query)

Bookmarking, Notes, and Sharing

- Bookmark any article, character profile, video, or merchandise item

Location-Aware Event Discovery and Calendar

- **Map and GPS Integration:** Users can discover nearby fan conventions, cosplay meetups, and screening events using location services.
- **Event Calendar:** Users can browse upcoming fandom conventions, meetups, and screening schedules, filterable by city, with ticket links.

Admin Control Panel

Add/edit/remove:

- Category content (Anime, Gaming, Movies, TV Shows, K-Pop, Comics, Manga, or Cosplay)
- Multimedia content, character profiles, and featured articles
- Optional Chatbot FAQ entries and knowledge base

- User feedback and fan-submitted content
- View usage statistics: active users, popular categories, chatbot interaction volume

Accessibility and UI Enhancements

- Dark mode toggle and font-size adjustment for accessibility
- Breadcrumbs for navigation clarity across categories
- Smooth transitions and loading spinners for media-heavy pages

Note: Boilerplate or readymade HTML template can be used, provided it is only for design aspect and not for implementing application functionality.

Important Note Regarding AI Usage:

You are encouraged to use AI-powered tools (such as AI-assisted Website builders, UI/UX design tools, code assistants, and image-generation tools) to enhance productivity and creativity. However, AI should be used as a supporting aid rather than a substitute for your own design, development, and problem-solving skills.

Do NOT rely on completely ready-made Website templates for your project, as this will adversely affect your evaluation. Your Web application's design, structure, and implementation should primarily reflect your own skills and understanding. Do NOT submit AI-generated code or content without meaningful modification and understanding. AI-generated suggestions may be used for guidance, learning, debugging, or improving productivity, but the final solution should demonstrate your own effort, logic, and implementation.

Acknowledge all the AI tool(s) used (for example, Copilot, Canva AI, Figma AI, Uizard, or similar) in your project documentation or submission.

During evaluation, judges may ask participants to explain their design decisions, implementation approach, and code. You are, therefore, expected to understand and be able to justify all aspects of your submitted work.

Do not use AI tools to fully produce ready-made documentation. This is strictly forbidden.

Bottomline: AI is your **assistant**, not your **developer**. Your knowledge, creativity, and coding skills should drive the project.

1.7 Non-Functional Requirements

There are several non-functional requirements that should be fulfilled by the application. They include:

- **Safe to use:** The application should not result in any malicious downloads or unnecessary file downloads.
- **Accessibility:** The application should have clear and legible fonts, user-interface elements, and navigation elements.
- **User-friendliness:** The application should be easy to navigate with clear menus and other elements and easy to understand.

- **Operability:** The application should be reliable and efficient.
- **Performance:** The application should demonstrate high value of performance through speed and throughput, especially given the media-rich content. In simple terms, the application should have minimal load time and smooth page redirection.
- **Scalability:** The application architecture and infrastructure should be designed to handle increasing user traffic, growing content libraries, and feature expansions.
- **Security:** The application should implement adequate security measures such as authentication. For example, only registered users can access certain personalized features.
- **Availability:** The application should be available 24/7 with minimum downtime.
- **Compatibility:** The application should be compatible with latest browsers and various devices.

These are the bare minimum expectations from the project. It is a must to implement the FUNCTIONAL and NON-FUNCTIONAL requirements given in this SRS. Once they are complete, you can use your own creativity and imagination to add more features if

required.

1.8 Interface Requirements

Hardware

- Intel Core i5/i7 Processor or higher
- 8 GB RAM or higher
- Color SVGA monitor
- 500 GB Hard Disk space
- Mouse
- Keyboard

Software

IDE: Appropriate IDE as per the platform

Frontend: HTML5, CSS3, Bootstrap, ReactJS/AngularJS/Angular/TypeScript, JavaScript, jQuery, and XML

Backend: Java SDK with Apache NetBeans or Eclipse, Jakarta EE

OR

C# with ASP.NET MVC and ASP.NET MVC Core (optional), Visual Studio IDE

OR

PHP with Laravel Framework

OR

Python with Flask or Django

OR

MongoDB, Express.js, Angular, Node.js

OR

MongoDB, Express.js, React, Node.js

Database: MySQL/SQL Server/MongoDB/JSON

For local hosting (optional): XAMPP latest version

AI Tools: Optional AI assistant/chatbot may be implemented using tools such as tawk.to or Zapier.

Database Design

Based on the given specifications, you will define suitable entities, attributes for these entities, and identify relationships between the entities. For example, some entities along with their attributes, primary keys (PK), and foreign keys (FK) can be identified as follows:

- **User** – user_id (PK), name, email, password_hash, created_at
- **Category** – category_id (PK), name (Anime, Gaming, Movies, TV Shows, K-Pop, Comics, Manga, Cosplay), description
- **Content** – content_id (PK), category_id (FK → Category.category_id), title, type (article, video, audio, image), description, release_date, popularity_score
- **Character Profile** – character_id (PK), category_id (FK → Category.category_id), name, bio, image_url
- **Merchandise Item** – item_id (PK), category_id (FK → Category.category_id), name, image_url, tag, is_upcoming
- **Bookmark** – bookmark_id (PK), user_id (FK → User.user_id), content_id (FK → Content.Content_id), note, created_at
- **Chatbot Query** – query_id (PK), user_id (FK → User.user_id), message, response, created_at
- **Feedback** – feedback_id (PK), user_id (FK → User.user_id), type, message, status

Similarly, you can define other entities and relationships between entities and methods representing activities on the entities.

Key Relationships:

- User → Category: many-to-many
- Category → Content, Category → Character Profile, Category → Merchandise Item: one-to-many (one category groups many records of each).
- User → Bookmark, User → Chatbot Query, User → Feedback: one-to-many (one user can have many of each).
- Content → Bookmark: one-to-many (one content item can be bookmarked by many users).

Note: These are just examples, with primary keys (PK) and foreign keys (FK) identified to show referential integrity between tables. You do not have to adhere to these structures and can design your own table structure with different columns.

1.9 Project Deliverables

You are required to design and build the project and submit it along with a complete project report that includes:

- Problem Definition
- Design Specifications
- Diagrams such as Flowcharts for various Activities, Data Flow Diagrams, and so on
- Database Design
- Test Data Used in the Project
- **Project Installation Instructions (MANDATORY)**
- **User Credentials for all Types of Users with Passwords (MANDATORY)**

Documentation is considered as a very important part of the project. Ensure that documentation is complete and comprehensive.

Documentation should not contain any source code.

The consolidated project will be submitted as a zip file with a ReadMe.doc file listing assumptions (if any) made at your end and SQL script files (.sql) OR schema files containing database and table definitions.

Note: Preferably, host the working Web application on a Website and share the URL for evaluation.

Submit a video (.mp4 file) demonstrating the working of the Web application, including all features under Functional Requirements. This is MANDATORY.

Over and above the given specifications, you can apply your creativity and logic to improve the system.

Sitemap: To understand the flow of the **Fan Hub Plus** Web Application, you will have to create a Sitemap and add it to the home page of your application.
